

AstroScope™ Night Vision

for Panasonic High Definition Camcorders

Finalist

Convert Your High-End Panasonic Video Camera Into a High-Performance Night Vision System.

Electrophysics AstroScope is a high-performance night vision module that transforms dark scenes (below 10⁻⁴ lux) into bright, high-resolution imagery. The AstroScope Night Vision Bracket assemblies are specifically designed for many fixed-lens camcorders to produce high-quality video under very demanding conditions.

The heart of the AstroScope system is the Gen III Central Intensifier Unit (CIU). AstroScope's modular design enables you to expand your capabilities by allowing you to easily transfer the image intensifier to other platforms.

Additionally, Electrophysics now offers the world's first HD night vision camera systems. Specifically designed for popular Panasonic® high-definition prosumer camcorder models, they produce high-quality, high-resolution night-time video. When you need to get the shot, AstroScope delivers.

Experience the difference.

Features	Benefits
• Professional-Grade Accessory	• Designed for use in field environments, the AstroScope system is rugged, compact and versatile.
• Modular Design	• Take advantage of the opportunity to "swap" a CIU from one AstroScope system configuration to another (for example, use one CIU for both a camcorder and a CCD camera night vision setup).
• Improved Low-light Performance by 8 to 10 F-stops!	• Capture bright, tack-sharp, edge-to-edge image detail. The AstroScope system is the highest performance design available for night vision photography.
• User-Friendly Design	• No special setup, calibration or operator training required. Simple, field-expedient configuration and operation.

AstroScope™ Night Vision

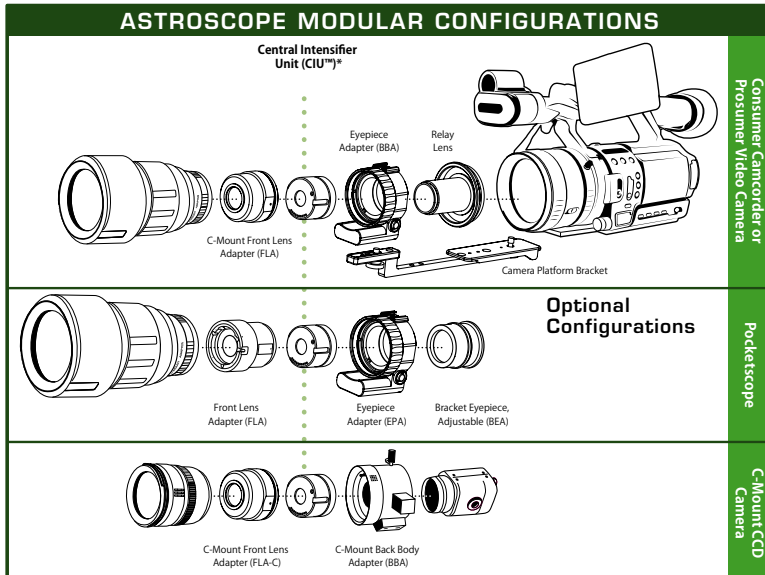

for Panasonic High Definition Camcorders

A design that delivers optimum performance in every configuration.

Unlike pocketscope-based night vision setups, AstroScope is specifically designed for image capture applications. Only AstroScope enables you to use high-performance lenses to shoot full-frame images at distances beyond 1000 meters!

AstroScope's modular design enables you to easily transfer the image intensifier to other camera platforms including CCD cameras and pocketscope assemblies.

- ◆ Use high-performance objective lenses
- ◆ No vignetting on most platforms
- ◆ Installs in less than 30 seconds

* The Central Intensifier Unit (CIU) is a common module used in all AstroScope configurations.

Please call us to discuss the wide variety of AstroScope components available to meet your specific requirements (including support for camcorders not listed here).
